Overview

This release brings notable improvements to streamline the restocking workflow and simplify future order creation with the use of *Favorites List*. Enhanced features allow users to prioritize tasks, reduce manual effort, and access carrier-specific tracking information.

Enhancements

- **Restock**:
  - **Restock From Orders:**
    - **Content List - Update the Product Detail Page** (ID: 9783) The product detail page for restocking has been updated to include a content list with corresponding items, along with their serial and lot numbers, and expiration dates. When a user scans a product, whether under the *Restocked* or *Remaining* tab, if the item is on the list, it will appear under *Restocked*, and the counts for each tab will be updated accordingly.
    - **Content List - Accept & Reject Items** (ID: 9848/9849) Added functionality to accept or reject individual items, along with the "Accept All" option, directly from the content list during restocking.
    - **Content List - Partially + Fully Restock a Product** (ID: 9850) Users can restock products partially or fully from the content list during the restocking process, offering flexibility mimicking the previous restocking method.
    - **Content List - Add Items Manually** (ID: 10250) Users can manually add products excluded from the content list but still part of the same order during the restocking process. By scanning or selecting items under the *Restocked* tab, the feature follows the existing process with both "Scan" and "Add Manual" options.
    - **Scan SSCC Number** (ID: 10243) An SSCC number (Serial Shipping Container Code) is a unique identifier used to track and manage shipments of products. By adding the ability to scan SSCC numbers for Restock from Orders, the scanning process functions the same as selecting "Accept All."
    - **Multiple Shipments** (ID: 10405) Enhanced the restocking process for multiple shipments of the same order and product (NDC), with each shipment displayed alongside its respective SSCC number. Each shipment/SSCC must be accepted individually to receive all items from multiple shipments within Restock from Orders.
  - **History: Ensure History Page Displays Same as Restock Screens** (ID: 10628) From the Restock History tab, when a transaction is selected to view details, all data is displayed in read-only format, including clear descriptions such as the restock type: "Restocked from Orders," "Manual Restock," or "Replaced Damage".

- **Order:**
  - **Shipment Tracking Details** (ID: 9851) When AllyIQ receives an ASN (Advance Shipping Notification) for EDI orders, a visual shipment indicator will appear on the Order landing page for orders with the status "Submitted" or "Partially Restocked." Users

can click the icon to view shipment details or select the tracking number to open a separate tab with tracking information from the carrier's site.

- <mark>**Display & Create "Favorites List" on the Order Landing Page**</mark> (ID: 9237/9240) The Order landing page now features a "Favorites List" button, launching a workflow that provides a convenient way to display and/or create a list of preferred ordered products.
- **Create New Favorite List - Product Search + Result** (ID: 9238) Introduced the option to create a "New List" or "Edit Favorite List," visible only to users with the appropriate permissions. Selecting either option directs the user to a screen where they can search by product Name, NDC, or Source, individually or in combination.
- **Create New Favorite List - Add/Remove Products** (ID: 9239) With the proper permissions, users can easily add or remove products while creating a new *Favorites List*, offering enhanced customization in order preparation.
- **Managing List - View Screen** (ID: 9241) Users can view the contents of a selected *Favorites List*, with the ability to multi-select, filter item details within each column, add or remove products, and delete the list entirely.
- **Managing List - Remove Product(s) from an Existing List** (ID: 9243) Introduced the ability to easily remove products from an existing list, providing greater personalization and improved list management.
- **Managing List - Delete an Existing List** (ID: 9242) Easily delete an existing *Favorites List* from the system, preventing the buildup of unused lists.
- **Create Order from Favorite List** (ID: 9555) Added the ability to create new orders using an existing list; enter purchase unit values for each product and add items to the order, saving time during the ordering process.
- **Create Favorite List from a Draft or Submitted Order** (ID: 9244/9245) Create a new *Favorites List* directly from a draft or submitted order, streamlining future orders for greater efficiency.
