Overview

This release introduces several enhancements across key workflows to improve usability, security, and data visibility.

Enhancements

- **Audit**:
  o **Partial Item Adjustments: Replacement Reasons Disabled** - "Replacement Required" reasons apply only when adjusting out the entire item (e.g. full amount for SDV or full quantity for MDV). If a user selects an item for partial adjustment, these reasons are disabled.

- **Formulary:**
  o **Permission Based Controls: PF Management** - Updating Alerts, Alternative HCPCS Codes, and Edit/Remove Source (in both Details and Source tabs) is now visibly restricted to users with PF Management permission only.

- **Inventory:**
  o **Serial Lookup: Item Details Based on Search** - Serial Lookup feature has been added to the **Inventory** navigation menu, offering detailed item information based on search results. When a match is found, AllyIQ displays the following information:
  Product Details: Display Name, Generic Name, NDC, Dose Type, Inventory Type, Clinic Location Info: *In Stock:* Current location, *Out of Stock:* Last known location | Inventory Type Details: *Purchased:* Purchase Order, Purchase Date, *CC/SP:* Patient Name (Last, First), ID, DOB

- **User Management:**
  o **Last Login Timestamp** - The user's Last Login within User Management is now updated immediately after a successful login, enabling accurate activity tracking and improved account security oversight.
