

Overview

This release introduces enhancements to order visibility, shipment tracking, and product identification, including improved handling of dose type labeling and temperature control across all workflows. These updates aim to streamline processes and enhance accuracy throughout the AllyIQ platform.

Enhancements

- **Order:**
 - BioCare Order Cutoff Time Display: The BioCare order cutoff time of 5:00PM Mountain Time (MT) is now displayed on all pages within the Order workflow. The system automatically converts this time to the user's local time zone, helping ensure timely order submissions and reducing the risk of missed cutoffs.
 - Restock from Order - Shipment Tracking Details: On the Restock from Order page, users can now click the shipment icon next to a product to view its tracking details, displayed in the same format as the Order page. The tracking number is shown as a clickable link, directing users to the carrier's external tracking page for real-time shipment updates.
- **Formulary:**
 - PF + **All Workflows** - Dose Type Now Displayed in Product Name: The system will now append the Dose Type as a suffix to the Product Display Name, based on the configuration in AllyIQ's Master Formulary. This suffix will appear consistently across all workflows and screens where the product name is shown, improving clarity and product identification.
 - PF + MF - Temperature Control Flag: A new Temperature Control toggle is now available in the General section of the Practice Formulary. When enabled, a temperature icon will display next to the product name as view-only in the Master Formulary.
Note: Please allow the AllyIQ team to update this setting for relevant cold chain products.
 - + **All Workflows** - Display Temp Control Icon: The Temperature Control icon now appears next to product names across all workflows when the temperature control flag is active. This update enhances visibility and ensures better tracking of temperature-sensitive products throughout AllyIQ.
